BOSCH

Invented for life

- ▶ Ruggedized IP PTZ camera with high performance thermal imager and HD visible imager sitting side-by-side

- ▶ Designed to provide the highest availability of useable images regardless of lighting conditions in extreme environments (weather, dust/debris/smoke, etc.)

- ▶ Unique metadata fusion feature provides the ultimate in situation awareness

- ▶ Exceptional early detection capabilities: Object detection up to 4517 m (14,820 ft) based on DRI criteria

- ▶ Advanced on-board intelligent video tracking, object detection even when camera is on tours

The MIC IP fusion 9000i camera is an advanced PTZ surveillance platform designed to provide early detection in mission-critical applications. With its dual visible/thermal imaging capabilities, the MIC IP fusion 9000i camera is the perfect solution for robust and high-quality imaging needs.

The camera's distinctive, ruggedized design is well-suited for extreme environments and adverse weather conditions such as high winds, rain, fog, ice, and snow.

Precision engineered using Bosch's domain expertise in material and mechanical engineering, the camera offers the most advanced imaging and positioning system solution available on the market.

Functions

Exceptional imaging performance

The MIC IP fusion 9000i camera incorporates a high-performance thermal imaging core and a 1080p starlight camera integrated in the same housing. This

allows the camera to deliver simultaneous thermal and visible video streams, maximizing the ability to detect and react to long-range threats.

Thermal imager

The thermal imager incorporates the latest un-cooled vanadium oxide microbolometer technology. This high sensitivity thermal imager is equipped with a fixed focal length Athermal lens that balances the field-of-view with maximizing the detection distance. User-adjustable settings for contrast and gain allow operators to optimize the image, ensuring delivery of the highest quality video. In addition, a wide variety of user-selectable thermal color modes are available allowing further optimization of the thermal image. Depending on model mix, QVGA resolution (320 pixels) and VGA resolution (640 pixels) versions are available, with choice of low (<9Hz) or high (30/60Hz) frame rates.

Visible imager

The 1080p60-capable visible imager has starlight technology and a 30x optical/12x digital zoom lens that provides high-quality images, excellent color performance, and unbeatable low-light sensitivity. High dynamic range ensures clear image reproduction in the most challenging high-contrast scenes.

Ruggedized design for extreme applications

The MIC IP fusion 9000i camera is designed for surveillance applications beyond the mechanical capabilities of normal PTZ domes or conventional positioning systems.

- Ingress

  The camera is environmentally sealed and complies with Type 6P and IP68 standards, when attached to a MIC-DCA or a MIC-WMB. This level of protection eliminates any risk of dust or water ingress, making the camera a perfect choice for use in extreme environments with rain, dust, snow, flying debris, and other challenging conditions.
  In addition, the MIC camera's ingress protection method does not need periodic maintenance, which is required on cameras with pressurized housings.

- Wide operating temperature range

  The camera's operating temperature range of -40 °C to +65 °C (-40 °F to +149 °F) enables reliable surveillance monitoring in global locations from cold northern latitudes to hot equatorial and desert regions.

- Rugged construction

  The all-metal body has been engineered to withstand IK10-level impacts, and continuous low-frequency vibration. With its symmetrical, cross-section designed surfaces, the camera is also well-suited to operating in sites with high wind conditions.

- Excellent corrosion protection

  The camera benefits from Bosch Automotive domain knowledge in material engineering and coatings. As a result, the superior metallurgy, chromate based pre-coating, and paint finish of the camera provides unprecedented protection against corrosion. Reliability is ensured by the camera's ability to withstand a 2000-hour salt atmosphere at elevated temperature corrosion resistance test, according to the ASTM B117 test method.

- Window Wiper and Defroster

  The camera features a highly durable, silicone wiper which removes moisture from both the glass and germanium windows. In addition, both windows incorporate embedded defrosters that minimize build-up of snow and ice, ensuring the highest-possible image details in extreme cold and moist conditions.
  The wiper can also be integrated with third-party washer systems for regular cleaning and maintenance activities.

Intelligent Video Analytics on the edge

The camera includes the latest release of Intelligent Video Analytics for monitoring both the visible and the thermal image streams.

Designed for mission-critical applications, the video analytics can reliably detect, track, and analyze moving objects while suppressing unwanted alarms from spurious sources in the image, even in harsh weather conditions.

Advanced tasks like multiple line crossing, loitering, idle / removed object detection, crowd density estimation, occupancy and people counting are available for live alarming and forensic search. Object filters based on size, speed, direction, aspect ratio, and color can be defined.

Set-up time is minimized because only the installation height of the camera must be entered to calibrate the analytics.

After the camera is calibrated, the analytics engine can automatically classify objects as upright person, car, bike, or truck.

Video Analytics while camera is moving

The Intelligent Video Analytics can trigger an alarm when the visible imager detects objects in motion in alarm fields while the camera is moving.

These alarm fields are defined once across all PTZ camera views. Any part of those fields that is currently within the camera's view becomes active. Thus, guard tours sweeping across the monitored areas in order to provide an intruder less time to slip by can now automatically alarm on those intruders as well.

If desired, the alarm can even be used to trigger the camera's Intelligent Tracking feature.

Metadata Fusion imaging

The metadata fusion feature enables operators to receive notification of detected events from both thermal and visible image streams, regardless of which image stream they are viewing. This gives operators a much higher level of situational awareness, and eliminates the need to monitor both visible and thermal images constantly.

For example, a standard camera viewing a scene with limited visibility produces an image such as the one below.

The same scene viewed using the visible imager of the MIC IP fusion 9000i camera would include metadata fusion events detected by the thermal imager, as shown below.

Once alerted, operators can switch to the thermal image (below) of the scene, where they can easily see the objects creating the alarm. Hence, the metadata fusion feature provides enhanced situational awareness.

Intelligent Tracking
The newest generation of the Intelligent Tracking feature ensures smoother camera motion for more comfortable viewing and more reliable tracking of objects even under challenging scenes.
On the visible imager, when Intelligent Video Analytics application detects objects or individuals, the camera can automatically activate the Intelligent Tracking feature, which controls the pan/tilt/zoom actions of the camera in order to track objects and keep them in view.
Areas with potentially interfering background motion (moving trees, pulsating lights, and busy roads) can be masked out.
The camera supports 2 Intelligent Tracking modes:
- Auto mode: In this mode, the camera follows any object that has triggered an alarm in the Intelligent Video Analytics application. This mode is most useful for scenarios where the alarm cases can be clearly defined, for example, when no motion is expected at all.

- Click mode: In this mode, users can click on any object detected by the Intelligent Video Analytics application to enable the camera to track the movement of the selected object. This mode is most useful for scenarios where normal scene activity is expected.

H.265 Video encoding
The camera is designed on the most efficient and powerful H.264 and H.265/HEVC encoding platform. The camera is capable of delivering high-quality and high-resolution video with very low network load. With a doubling of encoding efficiency, H.265 is the new compression standard of choice for IP video surveillance systems.

Intelligent streaming
Smart encoding capabilities, together with Intelligent Dynamic Noise Reduction technology and analytics, make the bandwidth consumption drop to extremely low levels. Only relevant information in the scene, such as motion or objects found with the analytics, are encoded.
The camera is capable of providing 4 streams of thermal video and 4 streams of HD visible video simultaneously (8 streams total). This allows the camera to deliver independent, configurable streams for live viewing, recording, or remote monitoring via constrained bandwidths.

Image Stabilization
Cameras on unstable mounts can move sufficiently to change the field of view. The higher the zoom value, the larger the change of the field of view. This change can make images unusable.
The camera has an Image stabilization algorithm that lets the camera sense continuous vibration. If it detects vibration, the camera corrects the shaky video in the vertical axis and the horizontal axis. The result is excellent image clarity and a stable field of view on the monitor. The Image stabilization function is important to eliminate movement that unstable camera mounts cause.
Note: Image stabilization is available on the visible camera only.

Other Features
The camera includes many advanced features that work to maximize performance and satisfy the most demanding system operation requirements.
- Scene modes
  The camera has a very intuitive user interface that allows fast and easy configuration to optimize image quality.
  The visible imager has five user-selectable scene modes with pre-configured settings that optimize the imaging for a variety of applications, including Motion, Low light, and Vibrant. Operators can select different scene modes for day or night situations.
  The thermal imager has 12 user-selectable thermal mode options, including White hot, Black hot, Red Light, Softlight, and Sunset.

### Recording and storage management

The Bosch Video Recording Manager application can control recording management for the camera. Alternately, the camera can use its embedded local storage and iSCSI targets directly without any recording software.

The camera's embedded local storage (internal EMMC-based memory) can be used for recording "at the edge" or for Automatic Network Replenishment (ANR) to improve the overall recording reliability. At the worst case--full streaming conditions, comprising both visible and thermal image streams, metadata, and audio--up to 4 hours of local storage time is possible. Furthermore, pre-alarm recording is available to capture details of an incident before the alarm actually occurs.

High performance PTZ operations

The camera has a closed-loop feedback control system using a 15-bit position resolver. This resolver ensures high accuracy coordinates are linked with every pan/tilt position. Because the camera always knows where it is pointed, it will return automatically to its original position even if moved by extremely high winds.

The pan and tilt mechanism of the camera is a ruggedized, spur gear system. The brushless motors directly control the pan and tilt movement using a finely-tuned gear train designed to minimize backlash and support continuous operation without much wear and tear.

With a full 360º continuous rotation pan, 296º tilt control, and super-quick pan (120°/second) and tilt (90°/second) operational speeds, the camera outperforms other cameras in its class.
Tilt range of MIC IP fusion 9000i camera

The camera's ability to operate at very slow speeds (<0.2°/second) means it excels at tracking slow-moving objects or objects at a distance.

The camera supports 256 pre-positions and two styles of Guard Tours: Preset and Record/Playback. One preset tour has capability for up to 256 consecutive pre-positions and the other with up to 256 user-defined pre-positions. Both offer configurable dwell time between pre-positions.

The camera also provides support for two custom recorded tours, which have a combined duration of 30 minutes of movements. The custom tours are recorded macros of an operator's movements, including pan, tilt, zoom, focus and pre-position activities. Operators can play back tours in a continuous manner.

System integration and ONVIF conformance

The camera conforms to the specifications for ONVIF Profile S and ONVIF Profile G. (ONVIF is the acronym for Open Network Video Interface Forum.) For H.265 configuration, the camera also supports Media Service 2, which is part of ONVIF Profile T. Compliance with these standards guarantees interoperability between network video products, regardless of manufacturer. Third-party integrators can easily access the internal feature set of the camera for integration into large projects. For more information, see the Bosch Integration Partner Program (IPP) website (ipp.boschsecurity.com).

Access and Data Security

Special measures have been put in place to ensure the highest level of security for device access and data transport. The three-level password protection with security recommendations allows users to customize device access. Web browser access can be protected using HTTPS and firmware updates are always protected with authenticated secure uploads.

The on-board Trusted Platform Module (TPM) and Public Key Infrastructure (PKI) support guarantee superior protection from malicious attacks. The 802.1x network authentication with EAP/TLS, supports TLS 1.2 with updated cipher suites including AES 256 encryption.

The advanced certificate handling offers:

- Self-signed unique certificates automatically created when required
- Client and server certificates for authentication
- Client certificates for proof of authenticity
- Certificates with encrypted private keys

- Installed Bosch Escrypt certificate, which ensures that the product is produced by Bosch

Installation/configuration notes
Interfaces for MIC IP fusion 9000i camera

The camera has been designed for quick and easy installation, a key feature from Bosch IP video security products.

The camera can be powered using a standard 24 VAC power source and/or by a network-compliant 95W High Power-over-Ethernet (Bosch's version of High PoE). With a 95W High PoE Midspan (NPD-9501A, sold separately) from Bosch, a single (Cat5e/Cat6e) cable connection provides everything needed to view, power, and control the camera. Using High PoE makes installation easier and more cost effective, as cameras do not require a local power source.

Easy setup is guaranteed by using or Configuration Manager or the web browser built into the camera. Access to all settings, live video, and control functions is available in a user-friendly web page format.

Technical specifications

MIC IP fusion 9000i cameras are available with different housing colors, two thermal imager resolution options, and thermal frame rate options. The last three letters of the model number identify the housing color ("B" (black), "W" (white), or "G" (grey)), the resolution, and the thermal frame rate. In the table below, "x" represents the letter for the housing color. **Note**: Some models are not available in all regions.

Model	Resolution	Frame rate
MIC-9502-Z30-x**QS**	320 pixel (Standard)	<9Hz
MIC-9502-Z30-x**QF**	320 pixel (Standard)	60Hz
MIC-9502-Z30-x**VS**	640 pixel (High)	<9Hz
MIC-9502-Z30-x**VF**	640 pixel (High)	30Hz

The average typical optimized bitrate in kbits/second for various visible imaging frame rates is shown in the following table:

FPS	1080p		720p	
	H.264	H.265	H.264	H.265
60	4200	1649	2600	1249
30	2600	1413	1300	1096
15	2100	1157	1100	902
12	1800	1075	1000	841
5	1250	746	600	597
2	500	407	270	343

Optimized bit rates for thermal image stream will typically average less than 800kbits/second. Actual bitrate may vary depending on the scene complexities and encoding configurations.

Access and Data Security

Password protection	Three-level
Web browser protection type	HTTPS
Firmware updates	Protected with authenticated secure uploads
Trusted Platform Module (TPM)	Supported
Public Key Infrastructure (PKI)	Supported
802.1x network authentication with EAP/TLS	Supports TLS 1.2 with updated cipher suites including AES 256 encryption
802.1x authentication using a RADIUS (Remote Authentication Dial In User Service) server	Supported
SSL certificate for use with HTTPS	Supported
AES encryption	Supports independent encryption with 128-bit keys

Local Storage

Recording capacity	16GB of internal EMMC-based memory. Provides local recording for minimum of 4 hours that includes continuous recording at maximum fps of both visible and thermal image streams, metadata, and audio.

Miscellaneous

Sectors / Title	4, 8, 12, or 16 user-selectable, independent Sectors, each with 20 characters per Title
Privacy Masks	32, individually configurable; maximum 8 per Pre-position; programmable with 3, 4 or 5 corners; selectable color of Black, White, or Gray, as well as an "Auto" option in which the camera selects the most prevalent of the three colors (Black, White, or Gray) in the background scene as the Pattern color.
Virtual Masks	24 individually configurable Virtual Masks to hide parts of the scene (background motion such as moving trees, pulsating lights, busy roads, etc.) which should not be considered for flow analysis to trigger Intelligent Tracking.
Pre-positions	256, each with 20 characters per Title
Guard Tours	Custom Recorded Tours - two (2), total duration 30 minutes: Pre-position tour - one (1), consisting of up to 256 scenes consecutively, and one (1) customized with up to 256 user-defined scenes
Supported Languages	English, Czech, Dutch, French, German, Italian, Polish, Portuguese, Russian, Spanish, Japanese, Chinese
Alarm control	Rules-based logic supports basic and complex pre-defined user-specified commands In its most basic form, a "rule" could define which input(s) should activate which output(s).
Washer Pump Interface	Control functions integrated. Alarm/ Washer Interface Unit (MIC-ALM-WAS-24, sold separately) provides electrical interface to user supplied washer pump device.
Camera status monitoring	Integrated sensors monitor operational status such as internal temperature, humidity level, incoming voltage level, vibration, and shock events.
Diagnostics	Various status conditions are tracked in internal diagnostic log. Critical fault conditions will also be displayed on screen.
Supported mounting options (with applicable accessories)	Direct to a surface On a wall (Conduit/cables down the wall) On the corner of a wall On a pole

Additional functions

Video authentication	Off / Watermark / MD5 / SHA-1 / SHA-256
Display Stamping	Name, Time, Pre-position title, Sector title, Compass/telemetry, Lens zoom factor, Alarm message, Custom Logo bitmap
Pixel Counter	Selectable area
Live image indicator	On/Off

Mechanical

Drive Unit	Brushless, integral pan/tilt motor drive
Supported mounting orientation	Upright Inverted
Pan Range	360° continuous rotation
Tilt Angle	292°
Tilt Range	Upright unit: -56° to +90° Inverted unit: -90° to +56°
Variable Pan Speed	0.2°/second to 120°/second
Variable Tilt Speed	0.2°/second to 90°/second
Intelligent Tracking Speed	4°/second to 120°/second
Pre-position Speed	Maximum 120°/second, with no more than 2.5 seconds to reach new position (excluding time to zoom and focus at new position)
Pre-position Accuracy	0.05° (typical)
Proportional Pan / Tilt to Zoom	Yes
Audible Noise	<65 dB

Electrical

Input Voltage	21-30 VAC, 50/60 Hz, and/or High Power over Ethernet 56VDC nominal
Current Consumption	4.0A (24 VAC) 1.5A (High PoE)

Power Consumption (typical) (Includes integrated heater, defroster, and fan)	72W (24 VAC) 72W (High PoE)
High PoE	95W High Power over Ethernet (Requires NPD-9501A midspan from Bosch (sold separately).) 56VDC
Redundant configuration	Connect both High PoE Midspan and a separate 24 VAC power source. If either the High PoE or 24 VAC power source fails, the camera seamlessly transitions over to use the remaining power source.
Surge protection	Built-in surge protection for power, data, and network interfaces

Communications / Software Control

Camera Setup/ Control	Via Internet Explorer web browser version 7.0 or later, Bosch Configuration Manager, BVMS (BVMS), Bosch Video Security Client (VSC), or support for third party software
Supported Serial Protocols	Bosch OSRD, Pelco D/P, Forward Vision, Cohu. Requires separate eLicense installation.
Cloud-based services	Time-based or alarm-based JPEG posting to four different accounts. Accounts can address FTP servers or cloud-based storage facilities. Alarm events can be set up to trigger an e-mail or SMS notification.
Firmware upload	Completed over network using built-in web browser or from Bosch Configuration Manager

User Connections

Accessory Interface/ Control Data	RS-485, simplex, user-selectable baud rate or auto-baud Used to communicate with optional Alarm/washer interface box (MIC-ALM-WAS-24) or with Bosch OSRD, Pelco P/D, Forward Vision, and Cohu serial protocols.
Power, network	Ethernet High PoE (95 W) RJ45 10/100Base-Tx, male connector; Female-to-female RJ45 coupler included

Power, pigtail	24 VAC (nominal)
Chassis ground	Ground wire with connector lug

Audio
